Population by Sex and Age Group

Males who belong to age bracket 5-9 have the greatest number in the male group, representing 5.86% of the total population. Females aging 15-19 have the highest population in the female group, representing 5.86% of the total population.

The derived total sex ratio was 103%. This means that for every 100 female, there are 103 males. The age bracket of 70-74 has sex ratio of 100%, which indicates that there was equal number of males to that of the females.

Sex ratios lower than 100 indicate that female population is greater than male population. This can be seen in age groups of 0-4, 10-14, 15-19, 20-24, 55-59, 75-79, and 80+. While ratios higher than 100 indicate that male population is predominant over female population as shown in age groups of 5-9, 25-29, 30-34, 35-39, 40-44, 45-49, 50-54, 60-64, and 65-69. Only group 70-74 has equal number of male to female.
